## **IMPROVED MODEL OF IFPS ACHIEVED 4 HRS FIRE INSULATION AND 4 HRS FIRE INTEGRITY**

---

GDS Global Limited (the “Group”) is pleased to announce that its wholly-owned subsidiary Gliderol Doors (S) Pte Ltd had recently fire-tested an improved model of its Insulated Fire Shutter Panel Shutter and achieved 4 hrs of Fire Insulation with 4 hrs of Fire Integrity. This is the highest level of fire insulation and integrity required by the Fire Codes of most countries, including Singapore.

With this, the Group will now be able to offer 3 different models of Insulated Fire Panel Shutters to meet the market requirements for 60mins, 120mins and 240mins of fire insulation respectively.

All 3 models will offer the following features:-

- Neat and Space-saving design with a single layer door curtain instead of the conventional two-layer systems;
- Durable steel-cladded door panels with no hinges, air gaps or exposed fabric material;
- Door panels are steel-framed and solid, offering good impact, wind and weather resistance. Suitable for use as external security shutters;
- Finger protection – no through-gaps between the door panels to catch fingers during door operation;
- Fitted with heavy-duty operating mechanism that is built for daily usage. No need to install a separate shutter for this purpose.

**Best of all, these shutters remain affordable even with all these features.**

For more information, please visit our Products page under “Fire-rated Shutter/Curtain Systems”.

*This design is the subject of our Singapore Patent Application Nos. 10201601222V and PCT/SG2015/000132, with International Patents pending.*
